See the incident. Not the alert queue.

LuceraAI investigates every alert across your security stack with a council of specialist AI agents. Its deep, unique knowledge of your organisation's habits shapes every verdict. It explains its reasoning and responds within the limits you set.

5
specialist agents, one for each domain

2
independent AI models on every verdict

3
operating modes, set site by site

24/7
every signal, including the ones at 2am

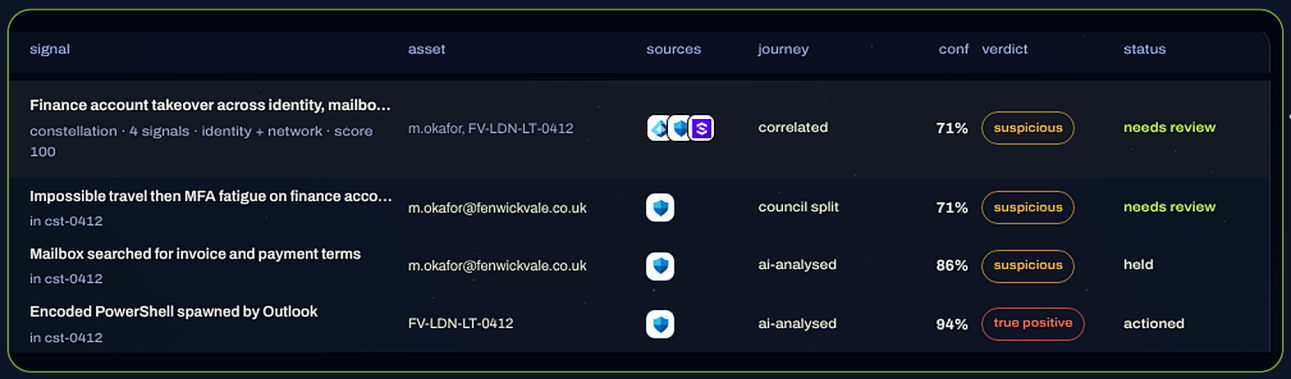

The problem today

Every alert needs checking, most are noise, and teams end up choosing which ones get a proper look.

- 2am alerts
- Too much noise
- Fast new threats
- Siloed tools
- The cost of out-of-hours cover

What changes with LuceraAI

- **Always on**
  Every signal investigated the moment it arrives.
- **Less noise**
  Routine false positives cleared, with evidence.
- **Knows your normal**
  Every verdict weighed against how your organisation works.
- **More from your tools**
  Investigation on top of the EDR you own.

every signal, investigated, with its verdict

From signal to decision, in five steps.

A conductor agent runs every signal through the council, weighs it against what's normal for your organisation, hunts whenever the verdict is challenged, and records every step in the verdict path.

the council		hunting		decision
1	2	3	4	5
Gather evidence	**Corroborate**	**Test with a hunt**	**Recheck**	**Decide and act**
Specialists collect the evidence, a baseline of what's normal and indicators of compromise.	A devil's advocate and an independent model challenge the verdict.	Its own queries look for evidence that proves or disproves it.	The verdict is reworked against everything the hunt found.	Within your rules, or escalated to a person.
you get **Enriched evidence**	you get **A tested verdict**	you get **Hunt results**	you get **A confirmed verdict**	you get **Decision and report**

How you stay in control

Start by watching and act when you're ready. Set the mode per site, so servers can stay in Observe while laptops move to Orchestrate.

1 · observe
Observe
See every verdict and its evidence, with no automated response.

2 · insights
Insights
Full investigation and a recommended response. Your analysts decide.

3 · orchestrate
Orchestrate
Response through your EDR when confidence and your policy both allow it.

- ✦ Fixed code acts, never the AI
- ✦ Disagreement goes to a person
- ✦ Source alerts never overwritten
- ✦ A higher bar for disruptive actions
- ✦ Every action logged
- ✦ Every verdict comes with a receipt

Inside the platform.

Signals are investigated by the council, joined into constellations, weighed against your Star Chart, and checked against every device Observatory can see.

1 Signals and the council

Every alert from any EDR, identity, email or cloud tool arrives as a signal. Specialist agents analyse it in parallel, and a second, independent AI model checks the verdict.

- Each specialist's evidence cited
- Confidence recorded at every stage
- Disagreement goes to a person

✦ confidence at each stage of one verdict

2 Constellations

Attacks rarely arrive as one alert. Related signals become one investigation, with correlation that is deterministic and evidence-backed.

- Strong links join into one case
- Weaker links stay visible as leads
- Every link records why it exists

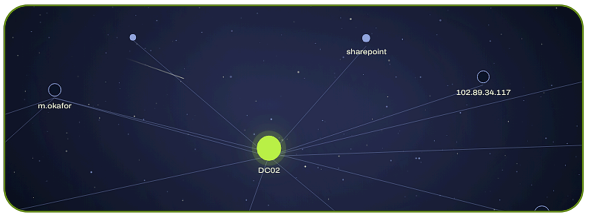

✦ four signals, one constellation

3 Star Chart

It learns your organisation's habits, so every verdict gets sharper: what's normal for you, how everything connects and how your team decides.

- Every fact shows where it came from
- Your team approves what it learns
- Paused the moment it's overturned

✦ the organisational map

4 Observatory

Every endpoint checked against every source, so you can see which devices your tools are missing.

- Gaps between tools shown straight away
- Ask coverage questions across sources
- Export gaps or save them as a policy

✦ devices one tool has missed

Your alerts. Our working.
